

Student Name : Andrea Nardinocchi, student id: W20108884
 Github : [AndreaNardinocchi/placemark](https://github.com/AndreaNardinocchi/placemark)
 Render/Heroku : <https://placemark-v63d.onrender.com/>
 Glitch : n/a

	Accounts	Placemark Features	API	Models	Deployment	Git
Level 1	A user is able to both sign up and log in.	The name of the Placemark can be added by the user.	API tests have been integrated into the app.	Mem model tests have been integrated into the App and they do work as expected.	The Localhost http://localhost:3000/ was used to develop and test the app.	The commit history is available in Commits · AndreaNardinocchi/placemark
Level 2	Cookie/Authentication for users is in place with JWT as well	Placemark features include several fields beside descriptions and lat/long geocoordinates	Core Unit Tests have been integrated into the app	Json does show some issues as some tests fail, but due to time constraints, I prioritized MongoDB tests	Unless I subscribe for its service, Glitch won't import my project (it kept spinning forever during my numerous attempts)	The README.md has been completed, and it encompasses all info needed to read the app, and to understand how it has been built out.
Level 3	Any user added can be updated or deleted	Categories can be 'selected' by the user in the dashboard page, which can then be opened to add up placemarks.	OpenAPI(Swagger) and tests are integrated into the app Placemark API	Mongo DB is fully integrated into the App, as all Mongo store files are added, and data stored in Robo T3. All tests pass on the mongo store.	Cloud Atlas is connected to the app and in sync with Robo T3.	All Releases on GitHub have been tagged.
Level 4	I did not add analytics on the dashboard, but I did add them to the category page.	Users can upload an image to the category page, and also delete it.	JWS Tests are in place, and fully integrated into the app.	n/a	The app has been deployed on Render.	n/a

Additional notes

Grading Spectrum

	<i>Accounts</i>	<i>Placemark Features</i>	<i>API/Tests</i>	<i>Models</i>	<i>Deployment</i>	<i>Git</i>
<i>Level 1</i>	Signup / Login	Name	Basic API	Mem	Locahost	git + commit History
<i>Level 2</i>	Cookie Authentication/ User Settings	Description, Location (lat,lng)	Core unit Tests	JSON	Glitch	Structured readme
<i>Level 3</i>	Basic Admin Account List/Remove Users	Categories	Open API (Swagger) + tests	Mongo	Cloud Atlas	Tagged releases
<i>Level 4</i>	Admin Dashboard + analytics	Images	JWT + tests	Firebase	Heroku / Render	Development / Feature / Master branch
